Dearest friends,

We want to publicly acknowledge the thousands of letters, embraces and messages that we have received from every corner of the world. We have, indeed, received an answer that for many, was unexpected: the Ecuadorean government has desisted in its intent to close [Acción Ecológica](#).

We have known (between you and us) how to defend our right to solidarity, to participation, and to denounce the aggressions against nature. Even though it might seem strange to celebrate this, we do, because the risk of losing those rights approached, and it was terrifying.

Our defense of nature might be uncomfortable for groups of power, and to the transnational companies, and perhaps especially to the Chinese, as their companies are present in all of our national territory with their extractive projects and construction of megainfraestructure. But we recognize that our organization is also profoundly loved and respected by communities and individuals with whom we have worked. And put in the balance, their lack of comfort on the one hand, and the love and respect on the other, the latter weighs more.

We live in a country marked by socio-environmental conflicts, oil exploitation in areas such as the YasunÃ-, mining in the Cordillera del CÃndor, and agrofuels in our dry and tropical forests. With such assault to territories, custodians of nature have called on us to participate, to be in solidarity, and to denounce such aggressions. We will continue to do so, with our intellectual and political support, with our presence in the streets, and through the construction of shared work - in order to confront the different causes and forms of aggressions against nature.

In accordance with our vision and mission, we commit to continue working so that the intelligence respects the Earth, and so that the Earth can sustain humanity.

We thank all of you for being there, and for giving life to and amplifying our voice, and for touching us with your loving drumbeats of peace, with justice and dignity.

Acci3n Ecol3gica

Together we are the inextinguishable fever, the little light that leads, and the expanse that crosses the night.
